Brand Representation in Mexico | CNC and Metalworking

Gates Engineered Lubricants

Industrial and Metalworking Fluid Solutions

Gates Engineered Lubricants develops high-performance industrial lubricants and metalworking fluids designed to improve machining efficiency, surface finish, tool life, and equipment reliability. Their product formulations emphasize clean operation, operator safety, and environmental responsibility.

The Gates portfolio supports a wide range of CNC machining and industrial applications, including cutting, grinding, forming, and general equipment lubrication. Products are engineered to deliver stable performance in demanding manufacturing environments.

Through application-driven support and fluid management programs, Gates partners with manufacturers to optimize production processes. Metalworking Specialists supports Gates Engineered Lubricants expansion in Mexico by developing distributor networks and providing technical support to end users.

- Metalworking fluids: soluble, semi-synthetic, straight oils, MQL, and EDM
- Industrial lubricants: hydraulic, way, gear, and R&O; oils
- Clean-running, low-odor, chlorine-free formulations
- Application support and fluid optimization programs
- Mexico market development and distributor enablement
