Quality Tool Service (QTS)

Precision Tool Regrind, Repair, and Custom Manufacturing

Quality Tool Service is a precision tool grinding and manufacturing company with decades of experience supporting industrial machining operations. QTS specializes in extending the life and performance of cutting tools through advanced regrind, repair, and modification services.

Using state-of-the-art CNC grinding equipment and inspection processes, QTS delivers repeatable, high-quality results for standard and complex tool geometries. Their services help manufacturers reduce tooling costs while maintaining consistent machining performance.

When combined with new tool programs, QTS regrind and repair services create a complete tooling lifecycle strategy. Through Metalworking Specialists, QTS programs are implemented in Mexico with coordinated distributor support and end-user engagement.

- CNC regrind programs for solid carbide and HSS tools
- Tool repair, geometry optimization, and performance restoration
- Custom tool manufacturing and modification capabilities
- Cost-per-part reduction and tooling lifecycle management
- Mexico-based coordination for distributors and manufacturing customers
